Wednesday Challenge Form

Group Members: The entire class

Problem Statement: Create a structure out of pvc pipe by giving directions to a blindfolded partner. The person giving directions is not allowed to touch the blindfolded partner or the pvc pipes.

Approach: After having everyone find a pair and form a line, we created a master sheet to check off the parts of the structure that were created. Also,

Solution: We lost to period 4, who took 36 minutes compared to our 42 minutes.

Lessons Learned: You have to be conscious of the fact that your partner's sight is sealed, so you can't give directions such as color or relative distance/direction.
